

Internet Explorer Auto Complete Settings

It is strongly recommended you do **NOT** use Internet Explorer-Auto Complete function to remember your password. The first time you enter your ID and Password, you receive a message that asks if you would like the system to remember your password. Please select NO.

- If you have already selected yes, and auto-complete fills in your password each time, you may run into trouble when your password changes. If you continue to let auto-complete enter your password, you must answer YES each time this question is asked.

If you wish to remove this option:

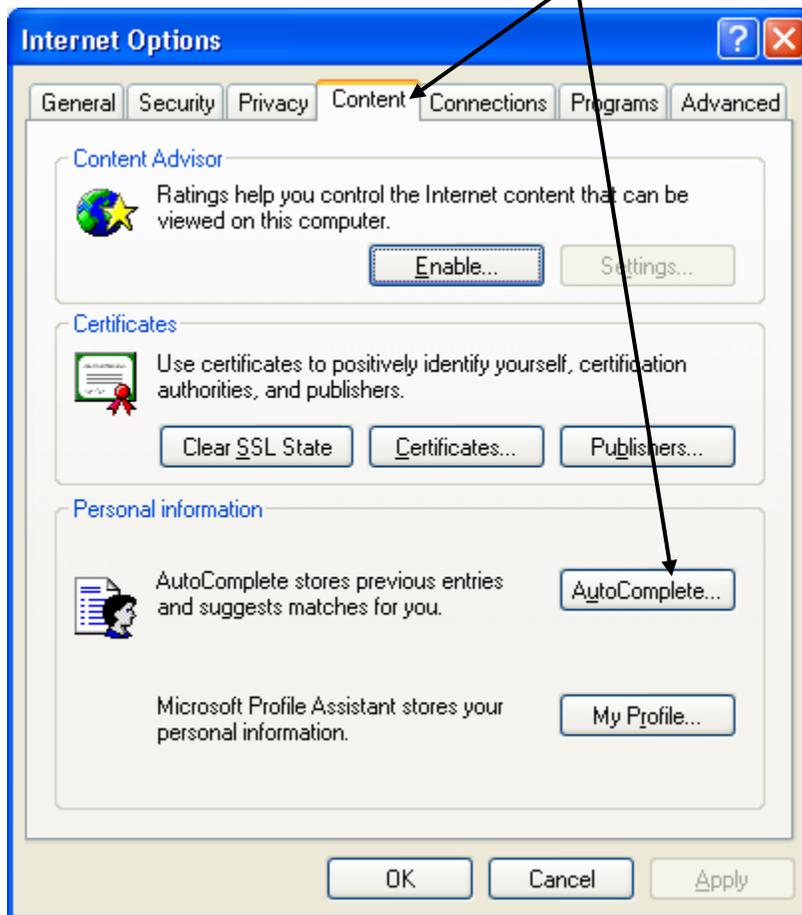

1. Click on the 'Tools' menu on the top Internet Explorer toolbar

2. On the drop down presented, choose 'Internet Options'

3. Choose Content then AutoComplete

4. On this screen, uncheck the “User names and passwords on forms” and “Prompt me to save passwords” boxes.
5. Select the “Clear Passwords” button. This clears **ALL** your Internet Explorer passwords.
6. Click ‘OK’ on the Auto Complete Settings box
7. Click ‘OK’ on the Internet Options box.
